

About Me

Wiraphat, AKA zPleum

Intro

I'm zPleum - a student and developer who loves building real, useful stuff. I'm all about practical coding, dark mode, and keeping things minimal and clean.

Background

I've been coding since I was young, starting with Minecraft plugins and slowly leveling up to web development, APIs, and tools for creators. Most of what I've learned is self-taught, project-based, and driven by curiosity.

My Approach

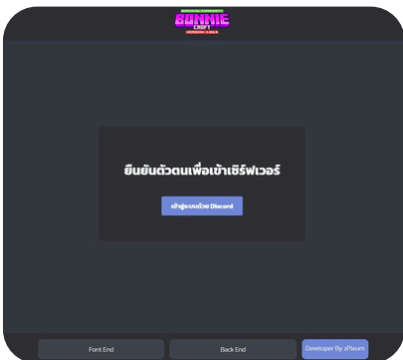

I build fast, learn fast, and focus on what works. I care more about clarity and simplicity than better perfection. Every line of code I write should solve a real problem or make someone's experience

What I'm Into

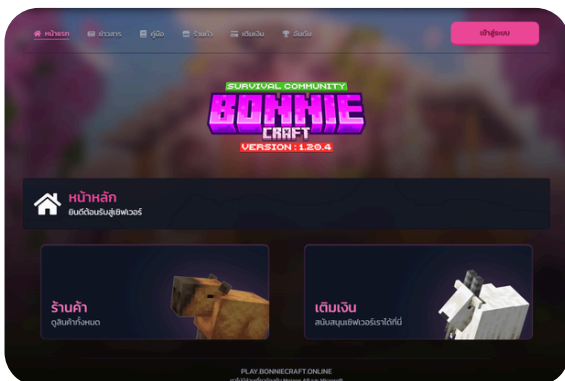

I enjoy working on my own projects - from Minecraft servers to full-stack apps. I like experimenting.

learning new frameworks, and sometimes just breaking things to understand them better.
